Assignment 05: Full Stack

This assignment is all about collaboration. You will need to build a server that will collaborate with the client-side so you can get and send data.

Requirements:
1. Create server that will support full RESTful Api for Users, Groups, Messages and all other entities that you need
2. Create a management screen for Users that will allow you to add/remove a user or edit info
3. Create a management screen for Groups that allow you to add/remove group (maybe to another group), associate/remove users.
4. Messages will be sent with web sockets and will be stored on server.
